

# Forecast<sup>PRO</sup>

## Web-Based Training

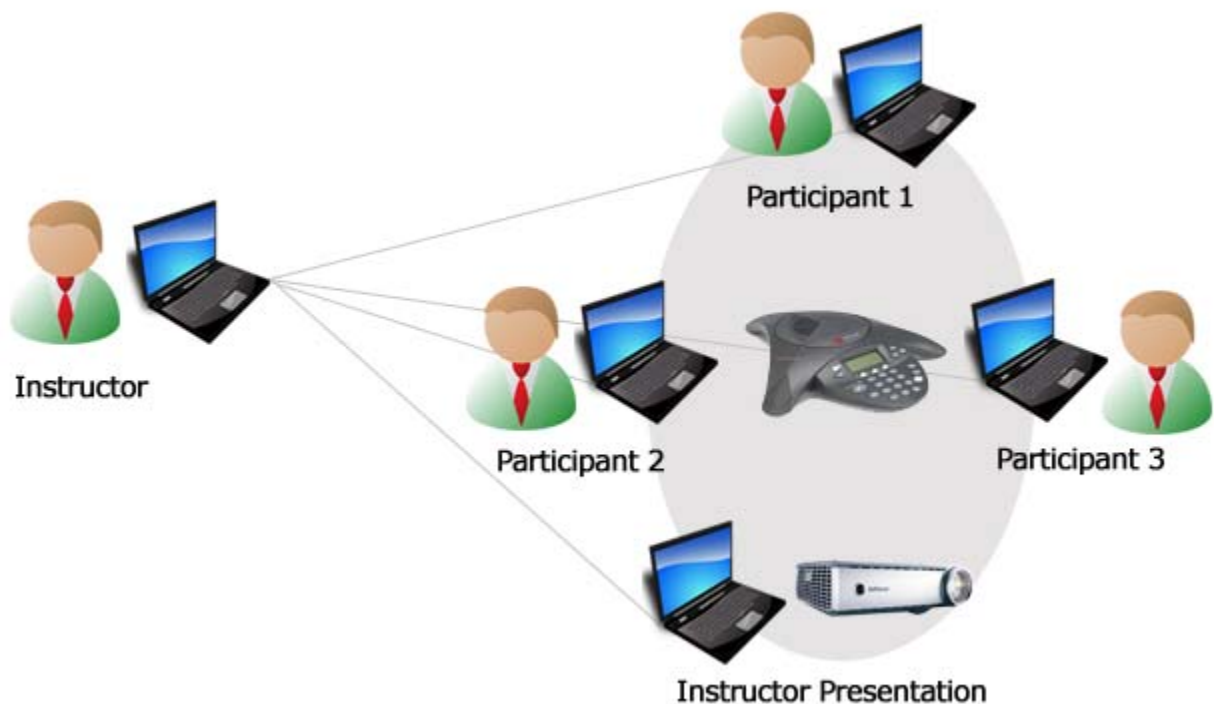

To help you get the most out of Forecast Pro, we offer a variety of training options enabling you to learn about the software in a format that best fits your needs. Our new Web-based training classes are customizable, convenient and cost-effective—these tailored classes offer something for everyone, whether you are new to Forecast Pro or an experienced user. And with the ability to share both the instructor's and participants' screens, it is as if the instructor is in the room, without the added cost and hassles associated with travel.

### Who is it For?

Web-based training is for new users who want to learn the software, existing users who want to learn advanced techniques to improve their current process, and potential users who want to get a sense of the capabilities and tools available in Forecast Pro. If a participant does not have a copy of Forecast Pro, a trial version will be provided.

### How Does it Work?

We use the popular meeting software WebEx to deliver the classes. All that is required is a computer with an Internet connection and Forecast Pro installed. Since the participants can see the instructor's screen and the instructor can see each participant's screen, all students are completely engaged in the training. Participants can easily ask questions and show the instructor examples. After the class, the instructor's presentation is provided to the participants for future reference.

## Web-Based Training

### **Customizable**

Web-based classes can be tailored to meet your needs. The classes can provide straightforward Forecast Pro training or be customized to use your data and/or focus on specific product features. Since the only class participants are members of your organization, confidentiality is not a concern. You can have candid discussions about forecasting issues in your company to get tailored guidance from an experienced instructor.

### **Flexible and Efficient**

Web-based training classes are scheduled in 4-hour blocks and can accommodate up to 3 participants at a time. Our scheduling lets you choose the timing of the classes to minimize the impact on your day-to-day business. With such a high degree of flexibility, Web-based classes enable you to get exactly the training you need efficiently.

For example, you can opt for a single four-hour session that will give you a “quick start” to get up and running with the basics of Forecast Pro. Alternately, you may choose more comprehensive training in multiple blocks spaced out over time so that you do not have to miss large chunks of time from work while getting in-depth training.

### **Cost-Effective**

Off-site training can be costly—travel and accommodation expenses quickly add up, not to mention the extra time spent away from the office. With no travel required and accommodating as many as 3 participants, Web-based classes are extremely cost-effective. The fee for a single 4-hour class is \$1000 and \$750/class when multiple 4-hour blocks are purchased at the same time. This means that you can introduce Forecast Pro to users or potential users for as little as \$250 per person!
