The Outlier Report View

Forecast Pro Views · https://www.forecastpro.com/documentation/forecast-pro-trac/forecast-pro-views/the-outlier-report-view/

The outlier report lists items where outliers have been detected and/or corrected. To open the outlier report view, click the **Outliers** icon on the **Reports** tab.

To customize the display, open the **Settings** dialog from the hamburger menu or the context menu.

The **Settings** dialog lists the optional columns you may include in the Outliers Report.

Status: Displays the status.

Status Assigned By: Displays the user who assigned the status.

Status Assigned Date: Displays the date the status was assigned.

Last Viewed By: Displays the user who last viewed the item.

Last Viewed Date: Displays the date the item was last viewed.

Description: Displays the Description for the item in the historic data file.

Pareto: Includes four additional columns: Pareto, % of Total, Ranking and Cumulative %. Consult The Pareto Tab for more information.

Comments (Y/N): Displays a value of Yes or No to identify which items have item-level comments associated with them.

Comments: Displays the most recent comment.

Iteration Statistics: Includes 5 additional columns which gives you more insight into the order in which the outliers were detected and why.

Custom Filters: If you have included filters in the project (see Custom Filter Fields in *Setting Up Your Optional Data*), you may add those to the report.

The Outliers tab of the **Options** controls the detection and correction settings. Consult Outliers for more details. The *Forecast Pro Statistical Reference Manual* also provides additional details on Forecast Pro's outlier detection methodology.
