Tutorial Overview

TRAC General Operations Tutorials · https://www.forecastpro.com/documentation/non-knowledgebase/tutorial-general-operation/tutorial-overview/

Forecast Pro's tutorials are designed to give you an overview of Forecast Pro's functionality. The tutorials are organized into two section: **General Operations** and **Forecasting Operations**. The General Operations tutorials are designed to teach you how to use the Forecast Pro interface, while the Forecasting Operations tutorials focus on customizing your models and forecasts.

The tutorials include both video and written lessons. All videos appear as red links, and the links will launch the videos on Forecast Pro's YouTube channel. You may use the links below or use the Bookmarks panel to navigate to each written lesson.

The first five lessons in the General Operations tutorial provide an overview of core functionality. You should be up and running after going through the first five General Operation lessons.

If you are using a Collaborator license: If you do not have a Forecaster license, these tutorials are not applicable.
