# forecast pro®

What's New in Forecast Pro TRAC V8

Enhanced Collaboration

✓ Forecast Pro TRAC Version 8 now offers both Excel-based and Project-based collaboration. Both approaches make it simple to divvy up a large forecasting project to multiple "child" spreadsheets or projects that can be worked on independently and then consolidated for a holistic view of your business.

✓ Excel Collaboration is ideal for S&OP, making it quick and easy to get input from sales and other key stakeholders throughout your forecasting process without them having to learn Forecast Pro. They can seamlessly view forecasts and make adjustments in Excel and easily load their changes back into Forecast Pro.

✓ Unlike Forecast Pro's Excel-based collaboration, which is limited to viewing forecasts and making overrides, project-based collaboration affords you complete access to all Forecast Pro functionality—including forecasting, reporting, graphing, and much more.

Automatic Updates

✓ Forecast Pro V8 will notify you when an update is available and allow you to download and install the update with a single click, so you can be sure your software is always up-to-date with the latest features and improvements.

✓ Forecast Pro TRAC V8 includes a new license manager allowing you to seamlessly manage and transfer licenses.

Improved Performance

✓ Forecast Pro V8 supports multi-core processing, which enables the software to complete tasks much faster by dividing them among multiple processing units (cores).

✓ Multi-core processing provides scalable solutions that can handle complex and data-intensive tasks. So even if you are forecasting thousands of items, Forecast Pro can effectively handle your business needs.

✓ Version 8 also includes improved performance logic throughout and offers more user-controlled performance settings.
